

Investing in your water future

Allconnex Water is upgrading its wastewater treatment facility at Coombabah at a cost of \$65 million.

With the population of the surrounding area expected to increase by up to 50 per cent between 2011 and 2056, Allconnex will increase the capacity of the plant from 75 million litres to 91 million litres per day to service this growth in the short term.

Stage 5 works include three components: Biological Reactor and Clarifier Works; Chlorine Contact Tank Works; and Digester Works. These components are vital in breaking down, filtering and disinfecting the wastewater before it is released into the environment.

All works will remain within the existing footprint for the

wastewater treatment plant and will not impact on the surrounding koala habitat or the neighbouring Ramsar listed wetlands.

The works will also help to reduce greenhouse gas emissions and improve the consistency of high-quality recycled water.

The project is scheduled for completion in late 2012.

What to expect

Disruptions

Customers are advised of frequent truck movements to and from the site along Brisbane Road, Coombabah and Arundel.

The facts

Compared to the original budget inherited from council water businesses, in its first year of operation alone Allconnex has delivered over \$200 million in capital works savings.

There will be at least a further \$260 million in capital works savings for the next four years. This is due to our large economies of scale and by working across three districts.

We will also invest more than \$1.2 billion in infrastructure over the next five years.
