

Investing in your water future

Allconnex Water is greening the Greenwood Lakes Reserve on the banks of Oxley Creek at Forestdale.

Upon completion, 12 hectares of a former sand mine will be rehabilitated for the local community to enjoy. Remaining sections of the reserve may also be improved in the future.

The Vegetation Management Program includes seven main activities which will be delivered in stages over the next three-and-a-half years.

These activities include seed collecting/propagation; staged weed removal; erosion control; planting of native species; mulching, soil treatment and

watering; installation of nest boxes, logs and other fauna habitat; and monitoring of the program.

Allconnex maintains an environmental management system which is used on all project works. This system is in line with international standards that ensure all activities are carried out in an environmentally responsible manner.

What to expect

Some localised impacts may be experienced from time to time, including temporary closure of parts of the Greenwood Lakes Reserve and diversion of pedestrian pathways, truck movements to and from the site, use of approved herbicides and increased levels of noise, dust and odour.

The works will generally occur between 6.30am and 6.30pm Monday to Saturday.

The facts

Compared to the original budget inherited from council water businesses, in its first year of operation alone Allconnex has delivered over \$200 million in capital works savings.

There will be at least a further \$260 million in capital works savings for the next four years. This is due to our large economies of scale and by working across three districts.

We will also invest more than \$1.2 billion in infrastructure over the next five years.
