

Investing in your water future

Allconnex Water is upgrading its wastewater network in Jimboomba.

The project, funded by Allconnex Water and delivered by the Logan Water Alliance, includes the installation of approximately 3.4km of pipes in the main commercial/residential area.

Pipes have been installed between existing pump stations in Johanna Street and Anders Street and will connect with the Jimboomba Wastewater Treatment Plant.

Jimboomba wastewater network upgrade

Two existing wastewater pump stations are being upgraded, while several new manholes are being constructed.

Work will be completed at the end of June 2011.

This vital project will enhance the capacity and efficiency of the existing wastewater network and support population growth.

What to expect

Works will occur at the wastewater pump station in Anders Street and along Spring Street and Manning Street in Jimboomba, between 6.30am and 6pm Mondays to Saturdays until the end of June.

Minor impacts may be experienced, including increased noise levels, dust, vibration and odour.

Traffic management will be in place throughout the construction phase, with partial lane closures and truck movements to and from work sites.

Thank you for your patience while these works are undertaken.
