Allconnex Water educates watersavers of the future

Allconnex Water is aiming to inform children about saving water from an early age.

Children attending Bright Horizons Early Childhood Centre at Labrador were introduced to Allconnex Water's free Watersaver Education Program this week.

The children participated in an interactive display on water, exploring where it comes from and reflecting on how they use it.

The program is designed to enhance children's knowledge and awareness about water.

The class was also introduced to the water cycle (weather, clouds, rain, sun and shade) and how they and their families can save water.

Bright Horizons Early Childhood Centre is the first of many schools from the Gold Coast, Logan and Redland districts that will participate in the program.

The 'Make your water mark!' school Watersaver Education Program has been developed by leading educators for school teachers through in-depth focus group discussions and research.

The education program is available for every year level (early childhood through to secondary school) on the Allconnex Water website.

Schools can register at www.allconnex.com.au to access a range of curriculum material with lesson plans, activity sheets and additional information to support teachers in their delivery of water education to primary and secondary students.

For further information call Allconnex Water on 1300 00 928 (1300 000 WATER) or email: education@allconnex.com.au
